

Ladybug Mix-up

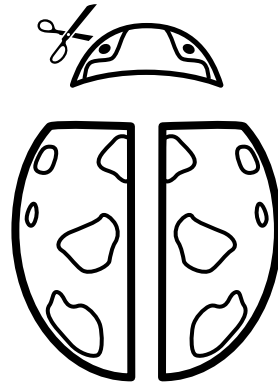

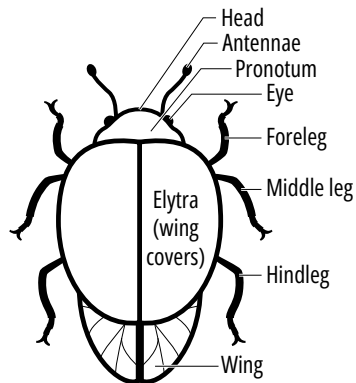

What makes a ladybug unique? The shape, colors and patterns of its elytra, or wing covers! Some of the ladybugs that can be found in North America are shown below. Create a ladybug by coloring in and cutting out any of these ladybug pieces. Then, paste the pieces on to the same ladybug parts in the picture frame. Or, draw and color in your own patterns to create a new species!

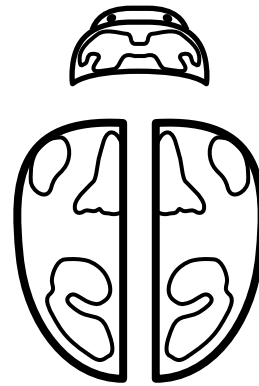

Species: _____

Common name: _____

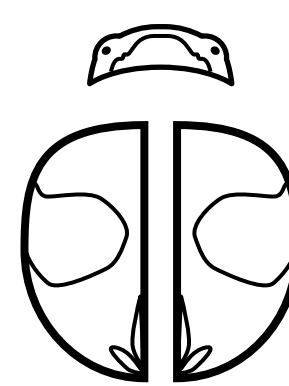

Ladybug anatomy
